# Go From Zero to AI-Powered Support in Minutes

A guided tour of **creating your first intelligent chatbot with Kiosk.**

Your Journey Begins with a Blank Canvas

The Kiosk dashboard is your starting point. From here, you can create, manage, and deploy AI chatbots to automate your customer support. Let's build your first one.
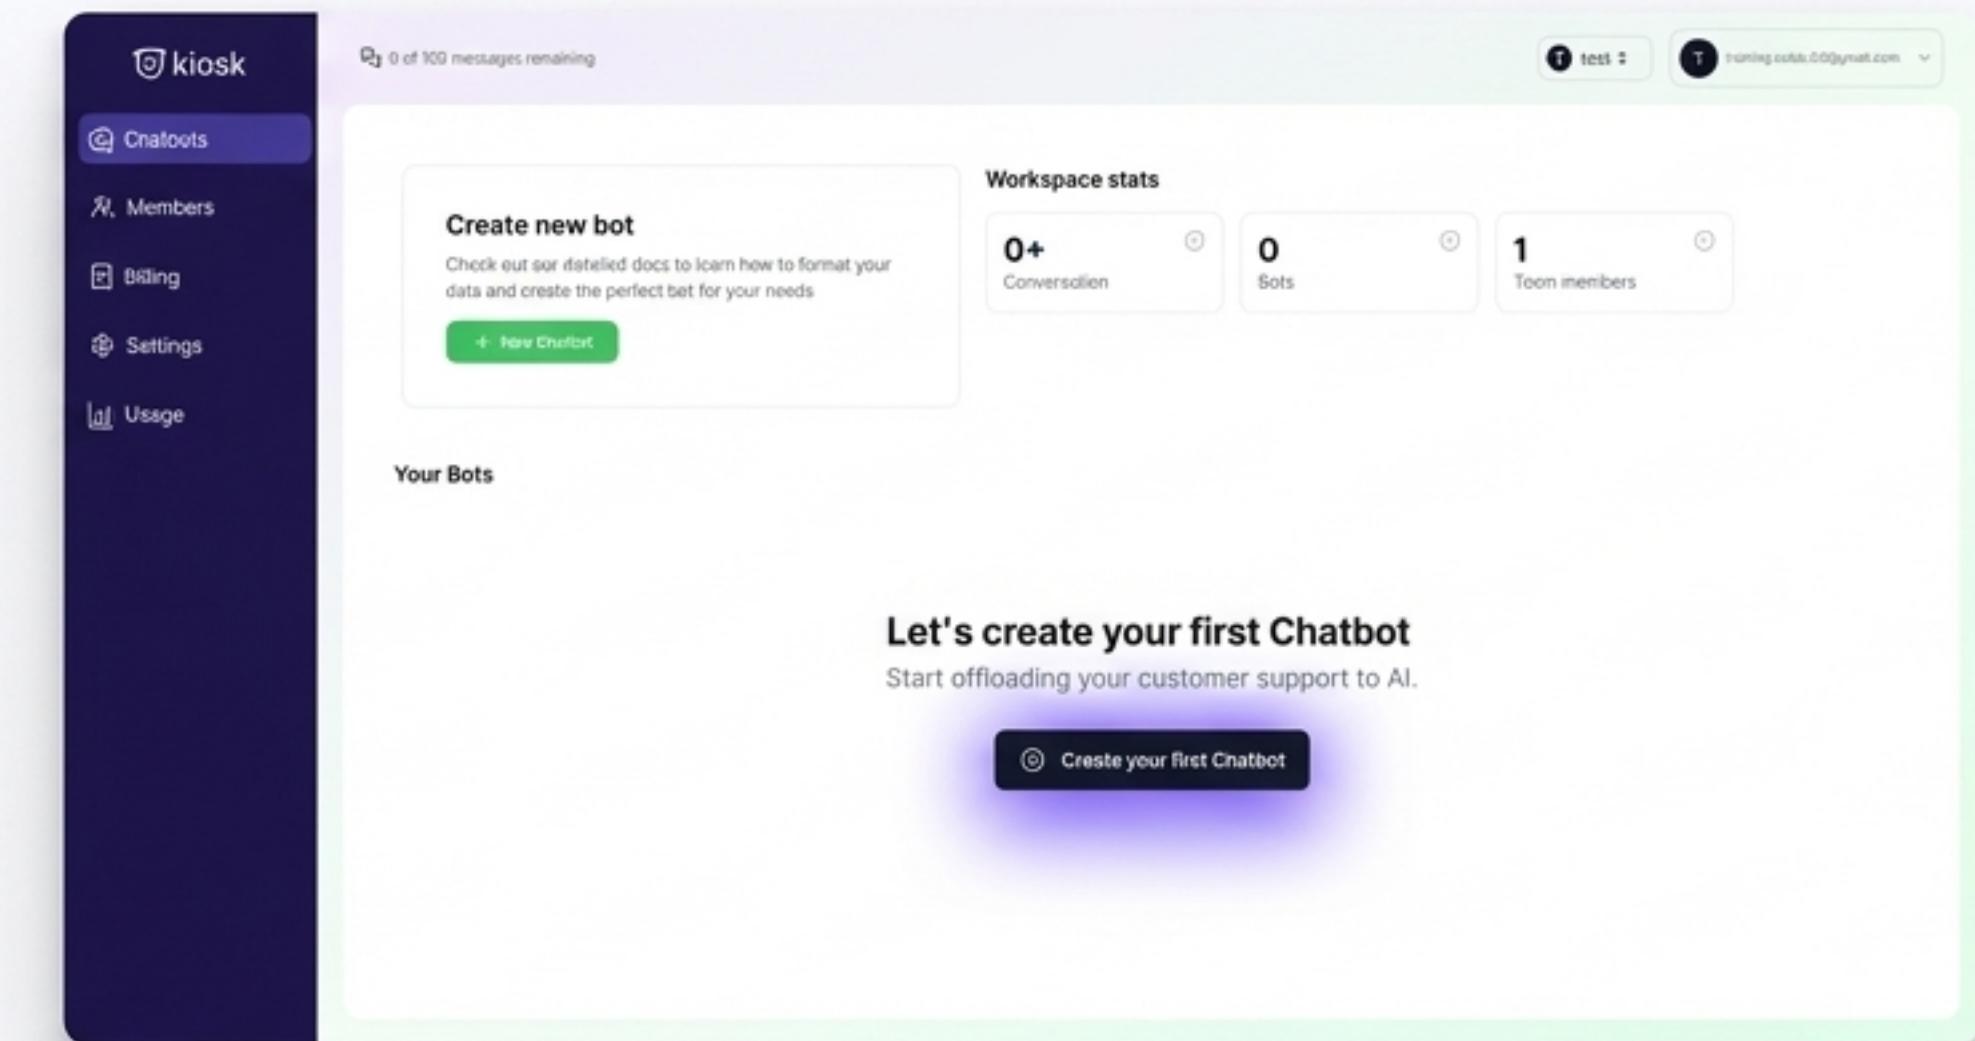

In 3 Simple Steps, Your AI Assistant Comes to Life
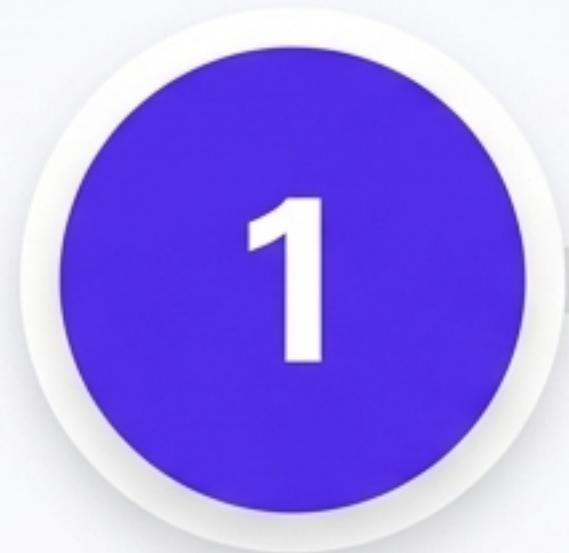

1

Setup Chatbot

2

Customize Widget

3

Tune Chatbot

We will walk you through each step, showing you how quickly you can train, design, and launch a fully functional chatbot.

NotebookLM

Step 1: Instantly Ingest Your Website's Knowledge

Begin by providing a link to your website. Kiosk will automatically crawl and understand your content, forming the knowledge base for your bot.
You can also train it on single links, sitemaps, or specific files.
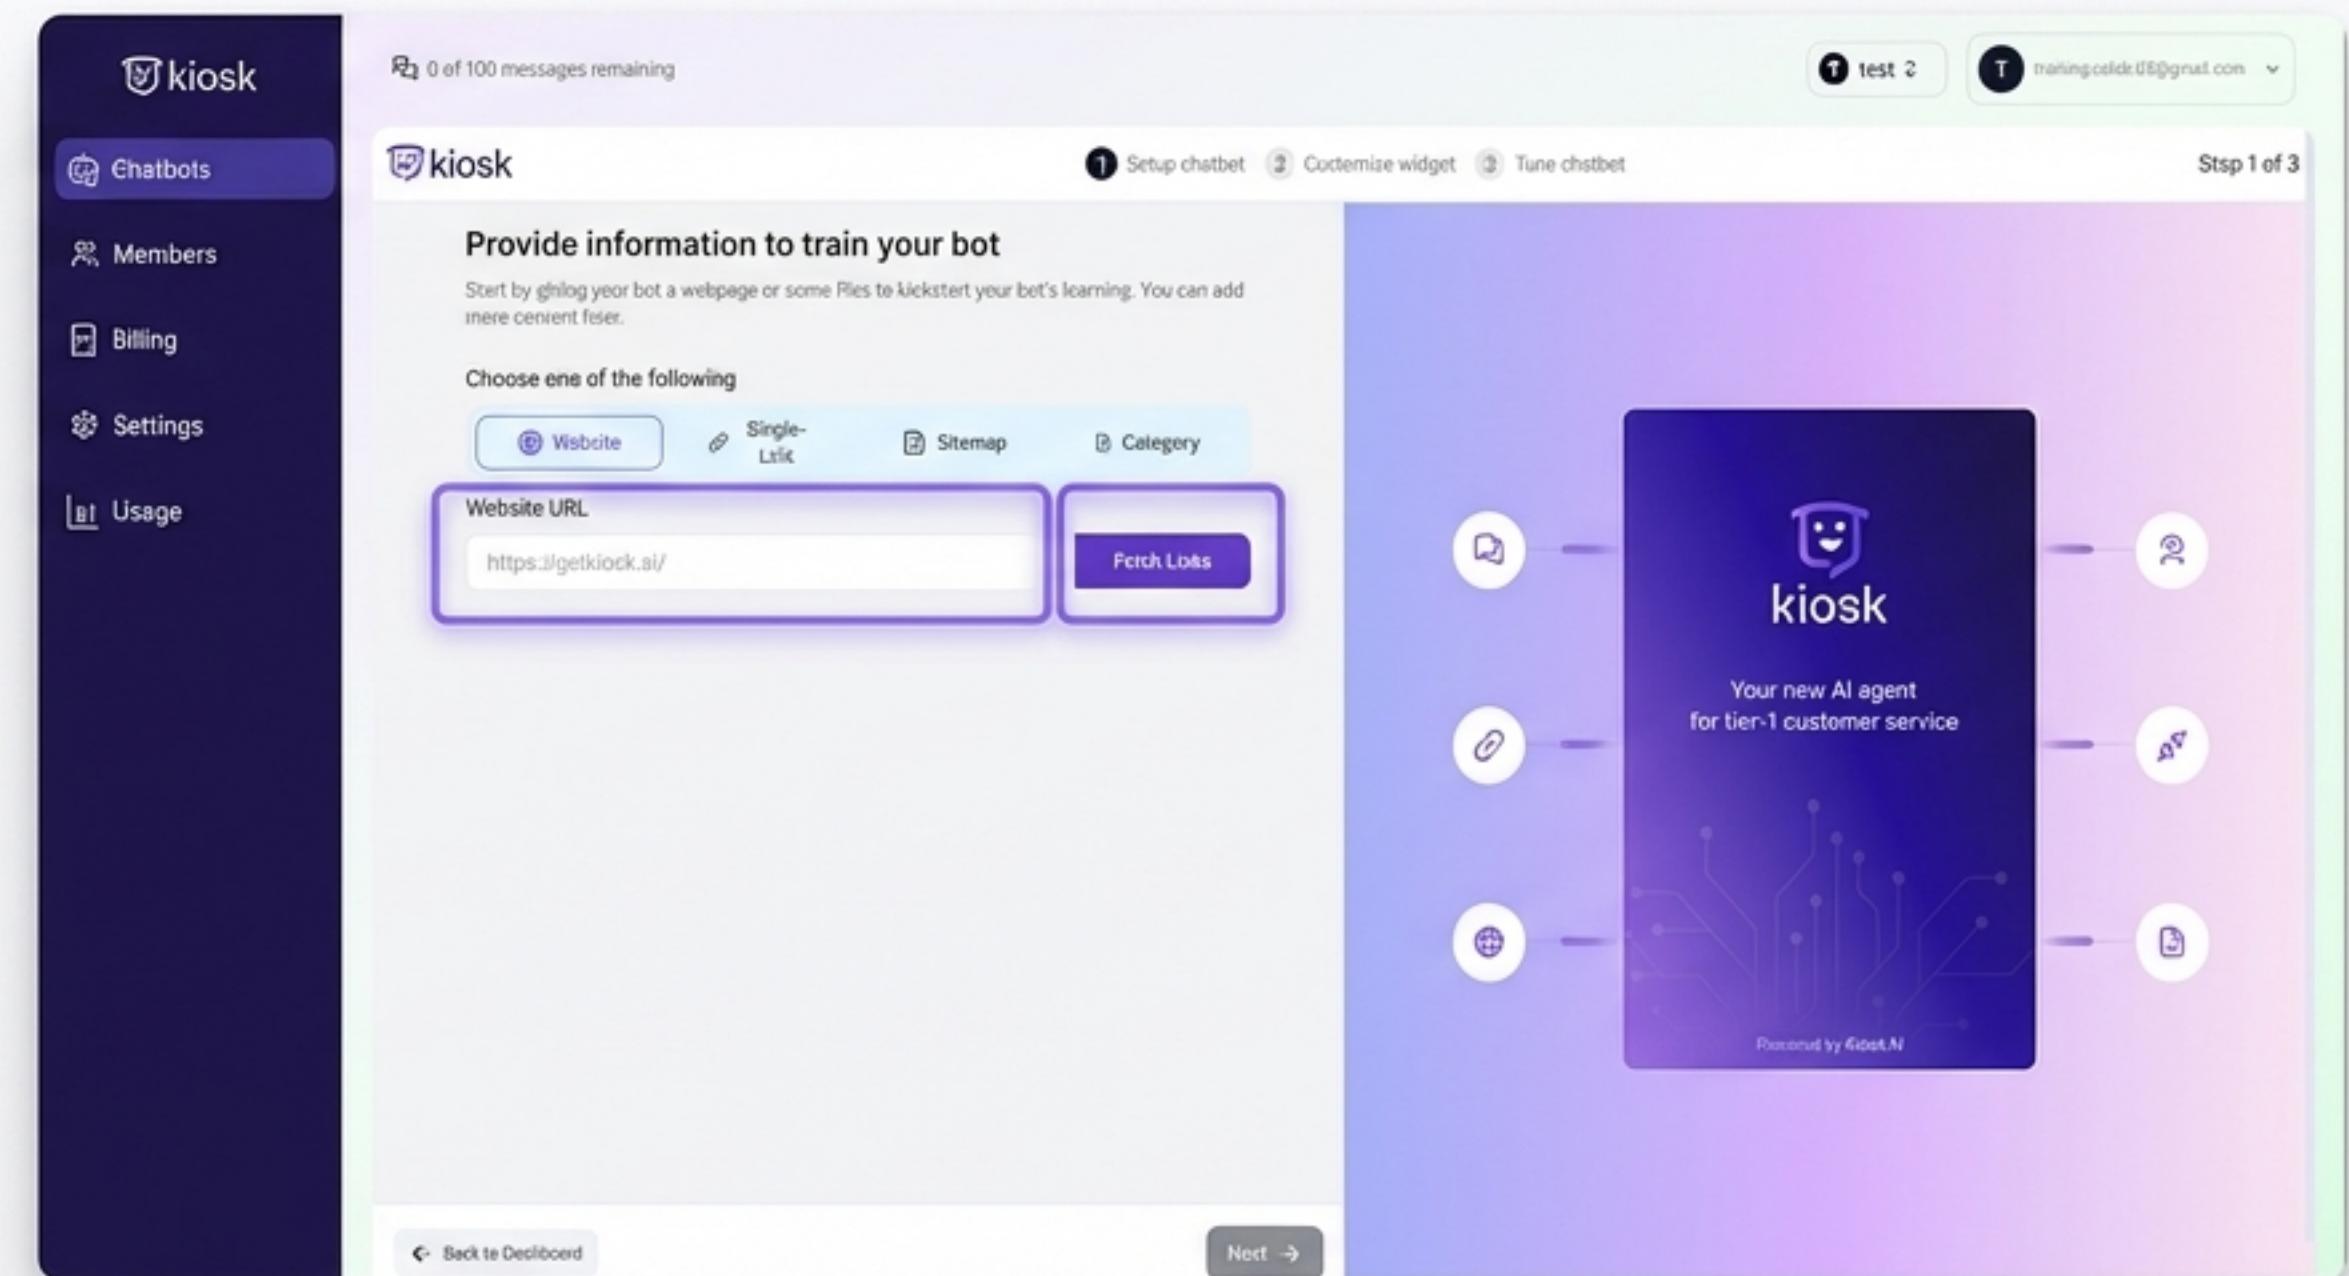

Curate the Exact Knowledge Your Bot Will Use

Once Kiosk analyzes your site, it organizes the content into collections. You have complete control to select which pages—like your blog, policies, or product pages—your chatbot will use to answer questions.

Step 2: Make the Bot a Seamless Extension of Your Brand

Personalize every aspect of your chatbot's appearance to match your brand identity. Upload your icon, name your bot, and set your brand colors. See every change instantly with the live preview.
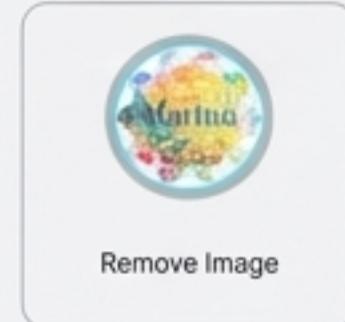

Step 3: Define Your Bot's Personality and Prompts

Craft the perfect welcome message to greet your users. Add Quick Prompts to guide them to common questions. You can even provide an 'About Us' summary to give your bot a distinct mission and tone.

Your AI Chatbot is Now Live and Ready to Help

In just a few minutes, you've created and published a powerful AI assistant. It's now ready to be shared with your audience and start handling customer inquiries.

Deploy Your New Assistant with a Single Line of Code

Embedding the chatbot on your website is effortless. Simply copy the provided code snippet and paste it into your website's HTML. Your bot will appear instantly, no complex development required.
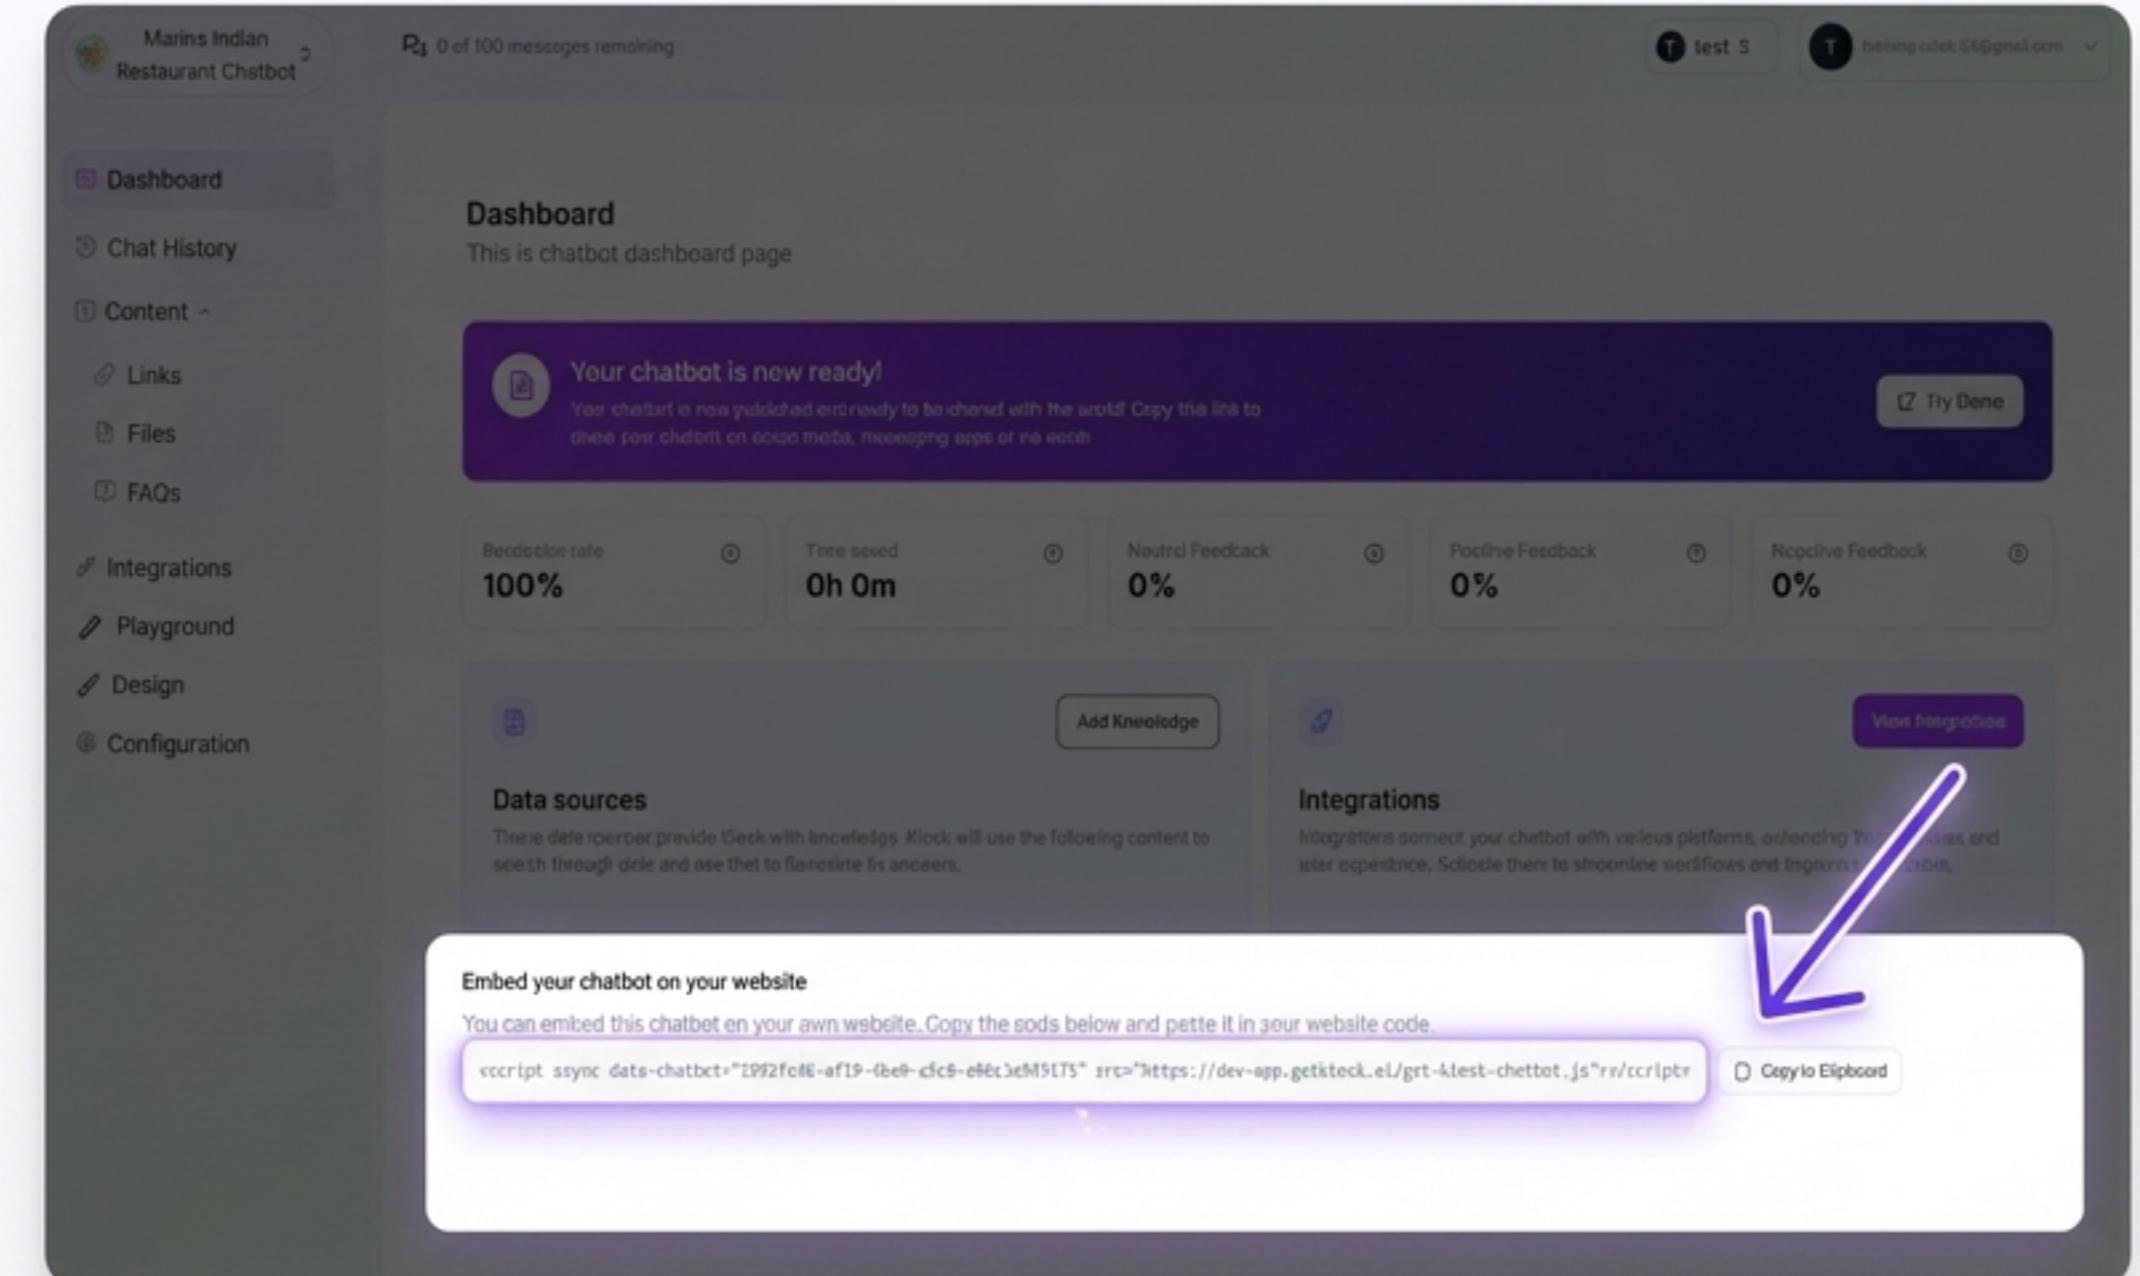

Test and Refine Responses in a Live Playground

Before your customers do, interact with your chatbot in the Playground. Ask it questions, test its knowledge on different topics, and see how it responds to various inputs. This is your space to ensure it performs exactly as you expect.
